

P.L.G.R.C.PHANI

☎ 8978179669 ✉ ravichandraphani1016@gmail.com 🔗 LinkedIn 🐙 Github 🌐 Portfolio

Skills

Programming Languages : JavaScript, HTML, CSS, TypeScript, Java, Python

Frameworks & Libraries : FastAPI, Node.js, ThreeJS, React JS, NumPy, Pandas, Matplotlib, SQLAlchemy

Databases : PostgreSQL, MongoDB, MSSQL, Redis

SDKs/APIs/Tools : AgoraWebRTC, Keycloak, CMS, Red5, Git, Github Desktop, Putty, WinSCP

Platforms & Infrastructure : ENSO (FaaS), Nginx, CentOS, Red Hat Linux, AWS (Console, CloudFront), MinIO

Cloud & AI Services : Azure OpenAI, Microsoft TTS Services API, XGBoost, Prompt Engineering

Experience

Rialtic (formerly ExponentialAI)

Feb 2025 – Present

Python Developer

- Stabilized and scaled the **Prior Authorization Automation pipeline** across multiple environments and claim-processing stages, strengthening the reliability of end-to-end claim adjudication.
- Designed and delivered multiple **Python FaaS modules** on the **ENSO platform** — powering prior-authorization determination and an automated **subrogation case-creation** pipeline (member search, best-match resolution, case identification, and reference-data retrieval) integrated with **external claims and eligibility APIs**.
- Engineered a **tiered member-matching** algorithm that escalates from single strong identifiers (**member_id**, **SSN**) to demographic **field combinations** (name + DOB), applying **weighted scoring** to deterministically resolve multiple-candidate matches.
- Achieved **90% memory optimization** by integrating **Redis** — scaling capacity from **200** to **2000–3000** claims and reducing **MinIO storage to 20%** — and added a **24-hour reference-data cache** that eliminates redundant external API calls.
- Architected **Rule 205 edit logic** from the **authorization matrix** and end-to-end data flow, enabling dynamic, rule-based claim validations aligned with complex business requirements.
- Built a **Rule Definer framework** (Python, **Pandas**) that transforms Excel-based authorization-matrix data into structured **JSON** and persists it in **PostgreSQL**.
- Improved **XGBoost** model performance through false-positive/negative analysis and preprocessing refinements, and performed large-scale **MSSQL** data validation with optimized queries.
- Partnered with clients to refine data requirements for claims scenarios, and automated deployment and version control of Python modules via **GitLab CI/CD**.

Infosys

Jan 2024 – Feb 2025

Senior System Engineer

- Built an AI-powered **Talking Head** chatbot integrating **Azure OpenAI** and **Microsoft TTS** for audio responses, with viseme-mapped **Digital Human Avatar** facial animations using **Three.js** and **Node.js**.
- Spearheaded a **web-based metaverse** platform supporting **100+ concurrent users** — integrated real-time video, audio, chat, and screen sharing via **Agora SDK**; engineered a **3D card shuffle game**; optimized load times by **30%** using Chrome DevTools and **pm2 cluster mode**.
- Resolved critical **production security vulnerabilities** and formulated **C# API** calls improving Amazon backend data retrieval speed by **40%**.

Infosys

Mar 2022 – Jan 2024

System Engineer

- **Virtual Living Labs:** Contributed to an internal R&D platform improving team collaboration and productivity.
- **HSBC POC:** Developed an interactive **3D globe** using **ThreeJS** and **amCharts**.
- **KPMG Deployment:** Deployed Virtual Living Labs in client environments with smooth external integration.
- **TGE Solariswind DB API:** Built custom **Node.js APIs** for efficient data retrieval.

Infosys

Nov 2021 – Mar 2022

System Engineer Trainee

- Trained in **Java**, **MySQL**, **Spring**, and **Advanced Java**; achieved **80%** in FA1–FA3 assessments.

Achievements

Appraisal from Rialtic (formerly ExponentialAI)

Jan 2026

- Earned an accelerated performance appraisal within 10 months of joining in recognition of high-impact contributions delivered during the first 6 months.

Certificate of Appreciation from Infosys | Award view

Jun 2023

- Received a certificate of appreciation for exemplary performance and effective project handling.

Education

GIET College of Engineering

Jun 2018 – May 2021

BTech, ECE7.85/10

Projects

- Finance-Manager:** Privacy-first personal finance platform with local LLM insights, EMI/investment tracking, and real-time portfolio analytics using FastAPI, React, and PostgreSQL
 - my-Portfolio:** Personal portfolio website with terminal-style UI | my-Portfolio
- API Service:** Microservice API gateway with rate limiting and logging | APIService (SourceCode)
 - GreenBasket:**A Grocery ordering platform with multilingual support | GreenBasket (SourceCode)
